

EMRI Emergency Medicine Risk Initiative

EMRI is a continuous cycle of **Risk**, **Safety**, and **Quality** (**TSGRSQ**). It is designed to reduce medical errors, the risk of misdiagnosis, and improper management of high-risk patient presentations. It has been proven to increase patient

safety as evidenced by a reduction in medical errors and medical malpractice claims of up to 40% in large hospital systems and medical groups.

This cycle consists of three components:

1) Web-based risk, safety, and quality education;

2) Intelligent medical record tools that support clinical decision making at the point of care and;
3) A performance evaluation (audit) that provides immediate department feedback and benchmarking with your group or division and the nation (over 300 EDs).

FEATURES

Web-based, interactive education

Intelligent medical record tools

Audit program

BENEFITS

Easy access, 24/7 availability
Ability to exit and enter course anytime
Comprehensive reporting capabilities
Team building
Large library of accredited courses
Serves different levels of providers

Clinical decision support at the bedside
Paper or electronic
Patented risk management module
TSGRSQ support at the point of care

Addresses all high-risks in EM
Throughput analysis
Comprehensive reporting capability
Drills down to individual practitioner
Benchmark to nation or peer group
Web-based, 24/7 availability
