

TSG clients are provided access to a robust online tool for auditing compliance with Risk management, patient Safety and Quality of care data elements. The performance evaluation assesses over 170 data elements across the highest risk clinical entities in emergency medicine.

EMRI Performance Evaluation

The program automatically generates graphs and tables that provide a comprehensive department report including an executive summary, department overview, physician and nursing reports and the ability to drill down to individual practitioners.

The audit provides a benchmark analysis of physician and nursing performance compared to the rest of the ED team, a self-designated comparison group and against the TSG national average. The performance evaluation highlights documentation, clinical practice, risk management, communication, team building and ED system issues; and provides a powerful and positive incentive for individual practitioner improvement.

FEATURES

Comprehensive reporting capability

Ongoing performance improvement

Web-based

Over 300 hospitals in TSG database

Evidence based/best practice **RSQ** data elements

Reporting by individual **RSQ** data elements

BENEFITS

Organization-wide reports
Drill down to individual practitioners
Strong incentive for improvement

EDs uniformly improve performance
Some practices use data to negotiate malpractice insurance rates

Easy access, 24/7 availability
User friendly

Benchmark analysis to comparison group and nation

Enhances practitioner participation
EDs make a long-term commitment to performance improvement

Build action plans based on individual practitioner results or system issues
