

EMRI Emergency Medicine Risk Initiative

EMRI is an evidence-based continuous cycle of **R**isk, **S**afety and **Q**uality designed as a system solution to improve patient safety and reduce the incidence of medical errors and the frequency of malpractice litigation. It has been proven to increase patient safety as

evidenced by a reduction in cases of 'failure to diagnose', a reduction in medical errors and a reduction in malpractice cases of up to 40% in large hospital systems and medical groups.

The EMRI Risk and Safety Cycle consists of three components: 1) Web-based education providing both CME and CE;

2) Intelligent medical record tools that support clinical decision making at the point of care and; 3) Clinical Performance Evaluation that provides extensive reporting on risk and safety, key physician and nursing documentation, ED systems, teamwork, communication and patient management.

FEATURES

Web-based, interactive risk and safety education

Intelligent medical record tools at the point of care

Clinical performance evaluation

BENEFITS

Easy access, 24/7 availability
Ability to exit and enter course anytime
Comprehensive reporting capabilities
Team building opportunity
Large library of CME/CE accredited courses

Clinical decision support at the bedside
Paper or electronic
Patented risk management module
TSGRSQ™ support at the point of care

Addresses EM's highest clinical risk entities
Comprehensive reporting capability
Ongoing performance evaluation tool
Drill down to individual practitioner's performance
Benchmark analysis to comparison group and nation
Web-based, 24/7 availability
