Risk Management Module 2.0

The Sullivan Group has built **R**isk, **S**afety and **Q**uality into a patented Risk Management Module (RMM) for integration with ED information systems. TSG currently works with the largest EDIS vendors in the market and the RMM is deployed in over 100 U.S. emergency departments. The RMM contains over 20 different features, including critical data element highlights, clinical risk alerts, key information, several vital sign features, Interactive Differential Diagnosis™, Quick Consult™, key clinical graphics, procedure and anatomy library and evidence based clinical decision support; all immediately available at the point of care. The RMM virtually eliminates the need for individual PDAs or reference books.

The result is a high level of documentation compliance, improved clinical practice, medical error reduction, improved patient safety and reduction in medical malpractice litigation. The RMM uses subtle visual highlights and access to information rather than pop-ups or hard stops in order to maximize risk and safety while minimizing practitioner interruptions.

The RMM facilitates rapid diagnosis of high-risk medical conditions and assists the practitioner to create a defensible medical record. The bottom line is that the patient is the big winner while the system provides the hospital organization with a tangible return on investment.

FEATURES

- Highlights risk, safety and quality data elements
- Embedded evidence-based and best practice content
- Vital sign functionality
- Clinical decision support
- Interactive Differential Diagnosis™ and Quick Consult™
- Critical alerts with visual cues
- Seconds-to-minutes emergencies
- Trending analysis

BENEFITS

- Research demonstrates this results in the highest level of documentation compliance
- Improve clinical practice and patient outcomes View clinical content instantly
- Dramatic reduction in medical errors and related morbidity and mortality
- Risk stratification strategies, scoring systems, protocols are all immediately available
- Immediate access to differential diagnosis (DDx) Medical resources at the point of care
- Enhances team communication Address potential life threatening conditions
- Expedites triage management of high-risk patients in the emergency care setting
- Provides evaluation of data trends that may not be readily apparent to the clinician
