

# Results

The Sullivan Group was established in 1998. Since that time our larger clients, representing over 13 million ED patient visits per year, have demonstrated significant reduction in medical errors and the frequency and severity of malpractice claims. TSG is now providing risk management and patient safety programs to over 600 U.S. hospitals and medical organizations in 8 different countries. We work with a number of

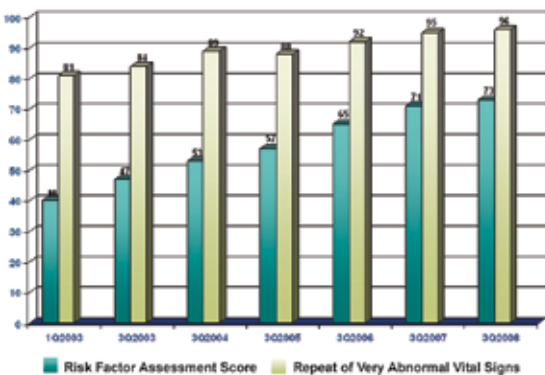

large medical organizations including HCA, Banner Health, Kaiser, LifePoint and Adventist. We have a fully integrated, robust IT platform that allows for tracking, reporting and peer group benchmarking for our EM Risk Initiative (EMRI) computer-based training and the risk and safety performance evaluation. TSG EMRI is a scalable system solution that

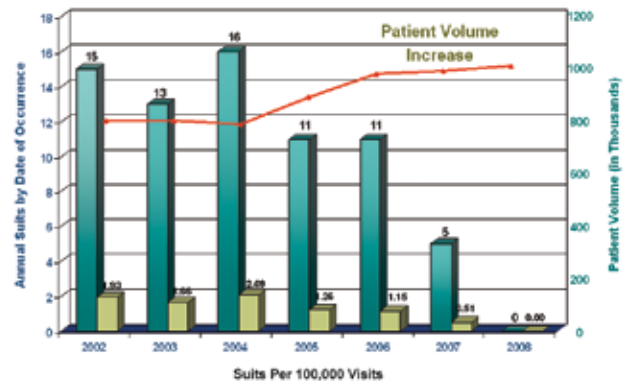

results in medical error reduction, improved patient safety, a sustainable reduction in malpractice litigation and lives saved.
